

TRIPLE-C - Capitalising climate change projects in risk management for a better Atlantic Area resilience

Lead Partner: Association Climatologique de la Moyenne-Garonne et du Sud-Ouest (FR)

Total budget: EUR 1.671.265 | ERDF: EUR 1.253.449

Duration: Jan 2019 – Jun 2021

Summary

In the past, communities have mainly operated in isolation from each other when dealing with climate change and disaster management. Greater cooperation would increase the effectiveness of reducing people's vulnerability to rising insecurities and to strengthen the Atlantic Area resilience. This project responds to the urgent need to achieve this by closer collaboration between current initiatives and previous ones successfully carried out across Europe.

Triple-C project is focused on the analysis, evaluation and capitalization of successful EU projects on the prevention and management of risks deriving from climate change, aiming at disseminating and transferring the best practices and results identified into policy making.

The project specific objectives are to: i) organize and update the results, methodologies and tools obtained from different projects in this field; ii) capitalize projects by exchange of good practices and experience among partners, as well as through identification of barriers and solutions and making recommendations; iii) assure the widest visibility and transfer of results of project products, methodologies and activities at the European level.

Partnership

- > Chambre d'Agriculture de la Dordogne (FR)
- > NEIKER-Instituto Vasco de Investigación y Desarrollo Agrario S.A. (ES)
- > Westcountry Rivers Trust (UK)
- > Limerick Institute of Technology (IE)
- > Universidade de Coimbra (PT)
- > Universidade de Trás-os-Monte e Alto Douro (PT)
- > Agencia Estatal Consejo Superior de Investigaciones Científicas (ES)
