

NEPTUNUS - Water-Energy-Seafood nexus: eco-innovation and circular economy strategies in the Atlantic Area

Lead Partner: Universidad de Cantabria (ES)

Total budget: EUR 2.312.013 | ERDF: 1.734.010

Duration: Apr 2019 – Mar 2022

Summary

The transition to a circular economy provides opportunities, especially for the food sector. However, in a global food economy, investments and new alliances between regions will be necessary. It is important to balance environmental influences with social and economic gain in policy and decision making for regional and global food flow.

The NEPTUNUS project aims to promote the sustainable development of the seafood sector in the Atlantic Area by supplying a consistent methodology for product eco-labelling and by defining eco-innovation strategies for production and consumption under a circular economy approach. This project will provide key actions for resource efficiency based on life cycle thinking, incorporating producers, policy makers and consumers in the decision making process.
